

How to Buy JGGL with Phil Godlewski

Quick Heads-Up...

I'm **NOT** involved with JGGL and I'm not telling you to buy anything here. I'm not buying it. This is purely a "how the process works" guide based on a video transcript, because a lot of people get tripped up by the wallet + network steps. (And with crypto, one wrong click can be permanent.)

I took a transcript from [Phil's Maduro video](#) and came up with some instructions to help people.

Use this information at your own risk. I am not responsible for misinformation here or for any problems or mistakes you may make.

How to Buy JGGL (aka "Jiggle") Tokens: A Plain-English Step-by-Step Guide

Quick heads-up: I'm not involved with this project, and this is **not financial advice**. This post is simply a "how to follow the steps" guide for people who are confused by the process. If you decide to do anything with crypto, do your own due diligence and only risk what you can afford to lose.

TL;DR (The Simple Version)

You're basically doing this:

1. Create a **TronLink** wallet (this is where you'll ultimately spend from).
2. Use an exchange that can send on the **TRON network** (the video uses **Kraken**).
3. If Kraken puts a "hold" on new deposits, you can route money from an established exchange account (like [Coinbase](#)) **into Kraken**, then **from Kraken into TronLink**.
4. Send a small amount of **TRX first** (to "activate" the wallet / cover network energy), then send **USDT** for the actual purchase.
5. Inside TronLink, use the **Discover** tab to open the purchase site, connect your wallet, and buy the **Founders Pack** first, then **Token Packs**.

Before You Start: The 3 Things That Confuse People

1. **Wallet vs. Exchange:** TronLink is a wallet. Coinbase / Kraken / Crypto.com are exchanges where you buy crypto.
2. **Networks matter:** The video specifically warns that Coinbase doesn't send on the TRON network, so you can't go straight from Coinbase to TronLink. (That's why Kraken is used in the middle.)
3. **Wrong network = big problem:** When you're sending crypto, you'll be asked to choose a network. Sending to the wrong network can result in lost funds. Double-check every time.

What You'll Need (Accounts + Apps)

- **TronLink wallet** (mobile app) — this is the wallet you'll connect to the purchase site.
- **Kraken account** — used because it can send on the **TRON** network.
- **Optional:** A "no-hold" exchange account like Coinbase (useful if Kraken locks new deposits for several days).
- **Crypto used in the process:** **TRX** (for fees/energy) and **USDT** (for the purchase amount).

Step 1: Create Your TronLink Wallet

Install TronLink, create a new wallet, and **secure your recovery phrase** (offline). Do not screenshot it. Do not paste it into websites. Do not share it with anyone. That recovery phrase is basically the "master key" to your funds.

Step 2: Get Funds Into Kraken (Two Possible Paths)

The end goal of this step is simple: get money into Kraken so you can send **TRX** and **USDT** from Kraken to your TronLink wallet on the **TRON** network.

Path A (Easiest): Fund Kraken directly

If Kraken lets you deposit funds with no hold (bank, card, Apple Pay, etc.), you can fund Kraken directly and skip Coinbase entirely.

Path B (Common): Use Coinbase ? Kraken to avoid a "hold"

If Kraken puts a multi-day hold on new deposits, the video's workaround is sending funds from an already-established exchange account (like Coinbase) into Kraken. The idea is that **receiving crypto from another exchange** may avoid the "new deposit hold" problem.

How it works:

1. In Kraken, go to **Receive** (receive crypto) and choose what you're receiving (often **USDT**), then choose the **Ethereum network** for the receiving address (because it's

coming from Coinbase).

2. Copy the Kraken receiving address Kraken gives you.
3. In Coinbase, send your funds to that Kraken address using the **Ethereum network**.

Important: This guide is based on the video's approach. Exchange rules vary by state/country, payment method, and account history.

Step 3: Send TRX First (This “Activates” TronLink + Covers Fees)

This is the step people skip and then wonder why nothing works.

1. In Kraken, **convert** a small amount of your balance to **TRX**.
2. In TronLink, copy your wallet's **public address** (the long string of letters/numbers).
3. In Kraken, **send TRX** to your TronLink address and choose the **TRON network** when Kraken asks.

The video suggests something like **~250 TRX** (they estimate around **~\$73** at the time of recording) and also mentions you might be able to do less (like **~100 TRX**) depending on minimums. Your goal is simply to have enough TRX to cover network “energy” / fees for purchases.

Step 4: Send USDT From Kraken to TronLink (This Is Your Purchase Money)

After your TronLink wallet has TRX in it, you'll send the larger amount you plan to spend as **USDT**.

1. In Kraken, convert the amount you plan to spend into **USDT**.
2. In TronLink, copy your wallet address again (same address as before).
3. In Kraken, send **USDT** to your TronLink address using the **TRON network**.

Double-check the network selection. The video's flow is “Coinbase ? Kraken on Ethereum,” then “Kraken ? TronLink on TRON.” That network switch is the whole point of using Kraken in the middle.

Step 5: Use TronLink “Discover” to Open the Purchase Website

Once TRX and USDT are in your TronLink wallet, the video says to do the rest inside TronLink:

1. Open TronLink and tap **Discover** (bottom navigation).

2. Tap the search/address bar and enter the purchase site link (in the video, this is a referral link to the JGGL/Jiggle purchase page).
3. When prompted, **connect your wallet** to the website.
4. Create a **username** for the platform (the video calls it the “Limitless platform”).
5. You may see prompts like “**Sign message**” — this is you approving actions in the wallet.

Step 6: Buy the Founders Pack First, Then Token Packs

The video is clear on the purchase order:

- **Founders Pack first** (tokens aren’t available until this is done).
- Wait a minute or two, then **reload** the page.
- Then purchase **Token Packs**.

The video also mentions that your max Token Pack purchase is tied to your Founders Pack amount (example: a \$1,000 Founders Pack allows up to \$1,000 in Token Packs).

Safety Notes: Read This, Seriously

- **Never share your recovery phrase.** Not for “support.” Not for “verification.” Not for anything.
- **Don’t click random links** from chat apps, Telegram groups, or comment sections.
- If someone claims they’re “support,” verify through official channels you trust. The video specifically warns people to be careful about links and mentions only trusting emails from an @jiggle.ai address.
- **Do a small test transfer first** if you’re nervous (especially the first time you send to a new wallet address).

Troubleshooting / Common Issues

“My TronLink wallet won’t let me do anything.”

You probably didn’t send **TRX first**. The video claims TRX is required for fees/energy and to “activate” spending from the wallet.

“Kraken says my deposit is on hold.”

This is the exact reason the video routes funds from an established exchange account (like Coinbase) into Kraken instead of depositing directly into Kraken.

“It says my address is wrong / funds didn’t arrive.”

Triple-check you used the **correct network** for that transfer and that you copied the full address. Also confirm you didn't mix up your **Kraken receive address** with your **TronLink address**.

Glossary of Terms Used

- **TronLink:** A crypto wallet app used to hold assets on the TRON ecosystem and connect to certain websites ("dApps").
- **Kraken / Coinbase:** Crypto exchanges where you can buy and send crypto.
- **TRX:** The TRON network's native coin; used for fees/"energy" on TRON transactions (per the video).
- **USDT (Tether):** A stablecoin pegged roughly to the U.S. dollar; used as the "spendable" balance in this flow (per the video).
- **Network (Ethereum vs TRON):** The blockchain rails your crypto travels on. Picking the wrong one can break the transfer.
- **ERC-20 / TRC-20:** Token standards on Ethereum (ERC) vs TRON (TRC). The video warns these aren't interchangeable.
- **Sign message:** A wallet prompt that approves an action (like connecting a wallet or confirming a transaction).
- **Public address:** The long wallet address you can safely share to receive funds (not your recovery phrase).

If you found this helpful, share it with the one friend who always texts you screenshots like, "What does 'choose a network' mean?"
